1 Introduction

1.1 Project overview

PriceWatcher was originally conceptualized to check for discounts on mouses with side buttons and find the most economic one while also having something that can endure stress.

I decided to expand on the idea by making it for general product price check and notification of said price change.

1.2 Scope

System will be implemented using both an extension and a React webapp that will act as a Dashboard.

Extension is the piece that will allow the user to pin down a product while navigating, it will sit on the side allowing user to view the product name, current price and a way to add the product to the watchlist.

The Dashboard is where the user can keep track of the products inside the watchlist and view price changes.

1.3 Brief description of PriceWatcher

At the moment PriceWatcher works as these two pieces but needs refinement and this document main purpose is keeping track of objectives.

2 Use Cases

2.1 UC-01 Add product

2.2 UC-02 Monitor product price

2.3 UC-03 Set discount threshold

2.4 UC-04 Receive price notification

2.5 UC-05 View monitored products

2.6 UC-06 View price history

3 Use Case Scenarios

3.1 UC-01 Add product

Preconditions

Main scenario

Alternative scenarios

Postconditions

3.2 UC-02 Monitor product

Preconditions

Main scenario

Alternative scenarios

Postconditions

4 System Requirements

4.1 Functional requirements

4.2 Non-functional requirements

5 Data / Domain Model

5.1 Products

5.2 Price records

5.3 Notifications

6 Constraints & Design Decisions

6.1 Chrome extension

6.2 React dashboard

6.3 Parser architecture

6.4 Storage

7 Future Requirements

User must be able to view price history and changes. User must also be notified if there are any discounts/price drop on watched products.
